Project Name	ServiceNow-Based Employee Laptop Request Application
Maximum Marks	2 Marks

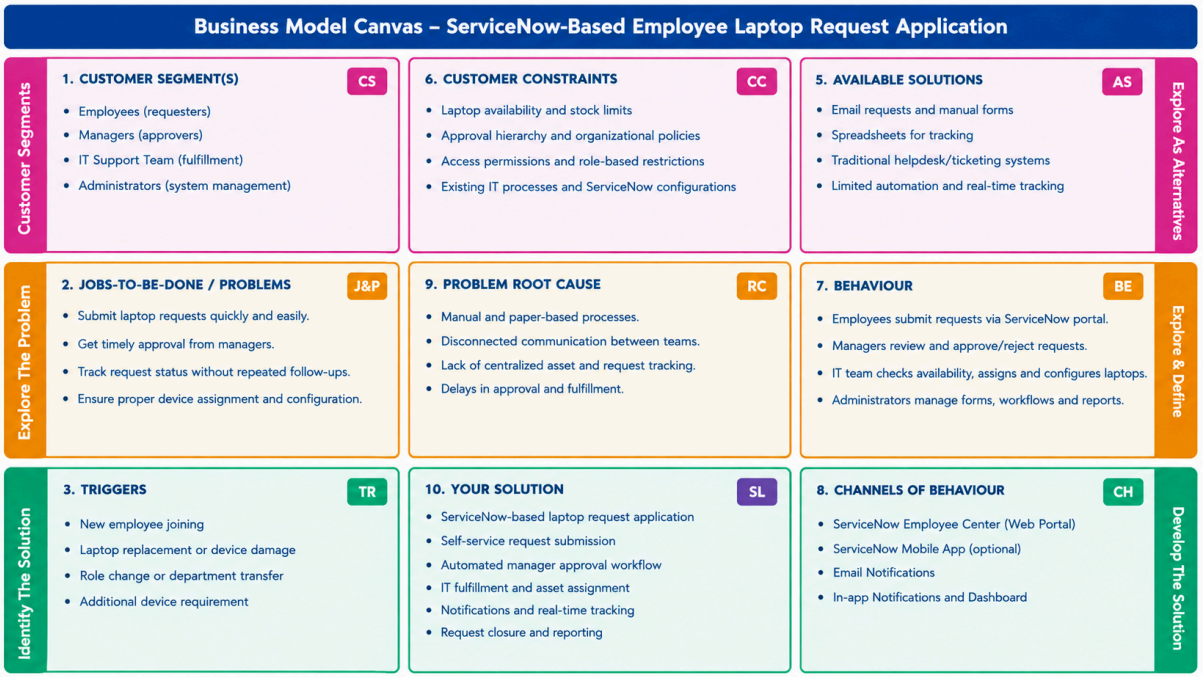

Problem – Solution Fit :

The Problem–Solution Fit for the ServiceNow-Based Employee Laptop Request Application identifies the difficulties employees and IT teams face in managing laptop requests. The proposed solution addresses these problems through a centralized ServiceNow platform that provides automated request submission, manager approval, IT fulfillment, real-time tracking, notifications, and asset management, resulting in a faster and more transparent laptop request process.

Purpose:

- ☐ Solve employee laptop request problems through a simple and centralized ServiceNow application.
- ☐ Improve solution adoption by providing an easy request, approval, and tracking process through the ServiceNow portal.
- ☐ Improve communication through automated notifications for request submission, approval, rejection, and fulfillment.
- ☐ Increase efficiency by reducing manual work, delays, repeated communication, and lack of request visibility.
- ☐ Understand employee and IT support needs to improve the laptop request and fulfillment process.
- ☐ Identify common request issues and provide a faster, transparent, and reliable solution for employees, managers, and IT teams.
