Project Design Phase
Solution Architecture

Date	09 september 2026
Team ID	
Project Name	ServiceNow-Based Employee Laptop Request Application
Maximum Marks	4 Marks

Solution Architecture:

The Solution Architecture for the proposed ServiceNow-Based Employee Laptop Request Application bridges the gap between employee requirements and an automated IT service management solution. Its goals are to:

- **Identify the best ServiceNow-based approach to automate the employee laptop request and approval process.**
- **Define the structure, components, workflows, and interactions of the application for employees, managers, and IT support teams.**
- **Specify key features and solution requirements, including request submission, automatic request numbering, approvals, assignment, notifications, and status tracking.**
- **Design an efficient end-to-end workflow that manages laptop requests from submission through approval, IT processing, allocation, and closure.**
- **Provide clear technical specifications for developing, managing, and delivering the solution using ServiceNow modules, workflows, forms, and automation features.**
